- Manlite** Electric Safety Cap Lamp.
- Manlite** Electric Safety Mule Lamp.
- Manlite** Electric Safety Trip Lamp.
- Manlite** Charging Stand.
- Manlite** Lamp Stand, Etc.
- CEAG** Electric Safety Hand Lamp.

## Safety

The Manlite Electric Safety Cap Lamp is absolutely explosion proof owing to its safety device. The Bulb is pressed by the lens against the safety device, which closes the circuit, and as soon as the lens or bulb is destroyed the circuit is automatically broken. Both headpiece and battery casing are locked—therefore absolutely fool proof.

## Efficiency

The Manlite Electric Safety Cap Lamp gives an evenly distributed light for 16 consecutive hours without recharging. The bulbs have an average life of about 800 hours. Also long life of battery plates. Metal parts of our outfit are practically indestructible. Figures we have obtained at the different Manlite installations now operating at lowest possible maintenance cost verify our claims.

## The "MANLITE"

## Durability

The Manlite Electric Safety Cap Lamp has a headpiece weighing only 4 ozs. The cable is protected by a leather sleeve, and a mechanical device prevents the cable from being twisted; a reliable cable connection is therefore obtained. Owing to the transparent vessel of the battery the plates can be continuously watched while on charge, and it can be instantly determined when the battery requires cleaning. The battery casing is made of steel and specially treated to prevent corrosion, and is magnetically locked. The belt hook allows an easy attachment of casing to belt.

Weight of complete outfit only 3½ lbs.

## Recharging

The Manlite Battery can be easily recharged with use of Manlite charging stand. Charging of batteries with reversed poles is absolutely impossible. All our charging stands are fitted out with automatic circuit closers.
